

How the program will work

Our Ag Recycling Partners are people like yourself who need to protect your hay, silage or cover your spring seedlings with quality ag-film.

Our role is to recover, clean and condition the used film so that it can be reintroduced into the plastic industry. This role assists you in protecting your environment and reducing your future costs.

We will be supplying large plastic bags to our Ag Recycling Partners for bundling. This allows for ease of handling, segregating and prevention of contamination of the waste stream.

Become involved with the program by contacting us at:
