

# Agricultural Film Recycling Program

Plastic film used in the agricultural industry falls into different groups. Our company collects Linear Low-Density Polyethylene (LLDPE) and Low-Density Polyethylene (LDPE). Keeping these groups segregated is critical to the success of a recycling program.

The recycling program is designed to be simple. Segregate the different types, collect into the designated bags and notify us to pickup.

We invite you to follow the three steps below:

## Items we collect and segregate

Greenhouse Film  
Bale wrap  
Marine Wrap

Silage Tarps  
Ag-Bags  
Shaving Bags, Salt Bags,  
Fertilizer Bags

Step 1

Each farmer will receive, by mail, 15 empty collection bags.

Step 2

The plastic film will be segregated by group and placed into the collection bags

Step 3

When you have 10 or more full bags, notify Switch Energy Corp for pickup.
